

Antistatic Conductive Table Cover Black (100 cm x 10 m)

Antistatic table cover (table mat) is manufactured for factories producing ESD-sensitive electronics and semiconductors or workrooms to protect against static electricity discharge and its hazards.

The product has a homogeneous surface and is manufactured to operate on the principle of resistance difference between the non-conductive top surface and the conductive bottom surface. The table mat, which can be used either rolled up or cut to the desired dimensions, is pinned at the corners and connected to a grounding terminal, thereby conducting static electricity through the surfaces to the ground.

Order Codes

TM-4510: (Black, 100cm x 2mm x 10m)

TM-4511: (Black, 82cm x 1.5mm x 10m)

Product Features

*Resistance range: $10^3 \Omega$ - $10^5 \Omega$

*Chemical properties: Non-flammable, odorless

*Dimensions: 1.5mm / 2mm x 82cm / 100cm x 10m

*Ordering options: m² or roll

*Color option: Single color (Black)

Compliant with IEC 61340-5-1:2016
