

ESD Antistatic Wristband Set with Banana Crocodile

An antistatic wrist strap or antistatic wristband is antistatic equipment designed to prevent the buildup of static electricity on the body from resulting in an electrostatic discharge (ESD). An essential item in EPA areas, this product is used to safely ground personnel working with sensitive electronic components and equipment. Antistatic wrist straps are used in conjunction with a grounding cord (CC). The strap cord is also connected to a desk terminal (EBP), completing the process of transferring static electricity from the body to the ground. This isolates the person from static electricity and its hazards in the work area.

Technical Specification**Cord length:** 2,4 m**Cord Type:** Spiral**Resistance Value:** 1M Ω (10⁶)**Cord Connection Type:** Male snap connector (10mm)***Compliant with IEC 61340-5-1:2016***
